Bank Statements

Bank Statements

The **Bank Statements** module has been entirely redesigned.

Account statements management

For **AFB120**, **MT940**, **AEB43** and **CAMT053** formats, the **Bank Statements** module allows you to manage the following information:

- Balances by bank
- Balances by account
- Pool balances
- Balances on transaction and value dates
- Transactions view
- History

This screenshot shows the 'Relevés de compte - Soldes par banque' (Bank Statement - Balances by Bank) page. The interface includes a header with navigation links: Accueil, Relevés de compte, Relevés intraday, Relevés d'opération, and Importation des relevés. Below the header, there's a search bar with filters for 'Nom de banque contenant...' and 'Numéro de compte local contenant...'. The main content area displays a table of bank balances with columns: BIC banque - Devise de compte, Nom banque, Nombre de comptes, Solde final au, Movements du 14/04, and Solde final au 13/04. The table shows two entries: BNP Paribas and Société Générale, both with a balance of 1410.00 EUR. At the bottom, there are buttons for 'Afficher 10 enregistrement(s)' and a page navigation section.

BIC banque - Devise de compte	Nom banque	Nombre de comptes	Solde final au	Mouvements du 14/04	Solde final au 13/04
BNPPFRPP - EUR	BNP Paribas	1	1410,00 EUR	0,00 EUR	1410,00 EUR
SOGFERPP - EUR	Société Générale	2	1165,00 EUR	0,00 EUR	1165,00 EUR

Intraday statements management

For **MT942** and **CAMT052** formats, the **Bank Statements** module allows you to manage the following information:

- Forecast balances by bank
- Forecast balances by account
- Pool balances

This screenshot shows the same 'Relevés de compte - Soldes par banque' page as the previous one, but with different data. The table now shows a balance of 1410.00 EUR for BNP Paribas and 1165.00 EUR for Société Générale. The rest of the interface is identical, including the header, search bar, and page navigation.

BIC banque - Devise de compte	Nom banque	Nombre de comptes	Solde final au	Mouvements du 14/04	Solde final au 13/04
BNPPFRPP - EUR	BNP Paribas	1	1410,00 EUR	0,00 EUR	1410,00 EUR
SOGFERPP - EUR	Société Générale	2	1165,00 EUR	0,00 EUR	1165,00 EUR

Bank Statements

Import

The import of statements can be launched automatically or manually, for any statement type (account statements, *intraday* statements, etc.).

Audit

The **Audit** function is used to display any event occurring in the application.

This screenshot shows the 'Paramétrage' (Configuration) screen with the 'Audits' tab selected. It displays the default audit type as 'Relevés de compte' and the language as 'Français'. There is also a note indicating 'Type d'audit par défaut : Relevés de compte' and 'Langue : Français'.

Groups management

The grouping feature can be used to sort the information displayed according to:

- Companies
- Banks
- Accounts

This screenshot shows the 'Groupes - Liste' (Groups - List) page. It displays a table of groups with columns for Nom (Name), Type (Type), Description (Description), Public / Privé (Public / Private), and Nb éléments (Number of elements). Two entries are listed: 'GLOBAL SOC' (Société, Privé, 3 elements) and 'HOLDING' (Société, Public, 1 element). There are buttons for 'Importer' (Import) and 'Nouveau groupe' (New group).

Reporting

From the **Reporting** function, you can set up report generation triggering and view, send or print the created reports.

This screenshot shows the 'Reporting - Paramétrage' (Reporting - Configuration) page. It displays a table of reports with columns for Libellé (Label), Type (Type), Sous-type (Sub-type), Format (Format), Statut (Status), and Date de dernière génération (Last generation date). One entry is listed: 'Rapport de contrôle des informations' (Information control report) in PDF format, last generated on 10/01/2020.

Bank Statements

Export

The **Export** function is used to set up the initiation of export processes.

You can view, send or print the generated files.

Export - Paramétrage

Origine	Libellé	Type	Sous-type	Format	Date de dernière génération
SXBE	A (en cours de création)	Relevés de compte	Mouvements	PDF	n/a

Nouvel export

Numéro de compte local contenant... Q

0 sélectionné(s) ▾

Afficher 10 enregistrement(s) Page 1 sur 1 1 enregistrement(s)

Data migration

A migration feature will help you import the data issued from the former module into the new **Bank Statements** module.

Web Administration

The **Web Administration** module lets you set up your bank contracts from a dedicated web site. Version **12.4** of **Sage XRT Business Exchange** allows you to manage information for the following levels:

- User Profiles

Profil	Entité	Consultation de li...	Saisie d'informati...	Autorité de valid...	Autorité d'appro...	Autorité d'admini...	Signataire

Web Administration

- EBICS Formats and Services

The screenshot shows a list of EBICS formats. At the top, there are navigation tabs: Sommaire, Entités, Contrats, Utilisateurs, Espace bancaire, Paramètres, and EBICS (which is highlighted). Below the tabs is a search bar with filters and actions buttons. The main area displays a table with columns: Libellé, Code format V2, Code format V3, Type V2, and Type V3. The table lists several formats like SCT International Transfer, SDD variants, and SDD B2B variants, each with its corresponding code and type.

Libellé	Code format V2	Code format V3	Type V2	Type V3
SCT International Transfer - variant 3 - version 3	pain.001.003.03.xct		FUL	
SDD - variant 2 - version 2	pain.008.002.02.sdd		FUL	
SDD - variant 3 - version 2	pain.008.003.02.sdd		FUL	
SDD B2B - variant 2 - version 2	pain.008.002.02.sbb		FUL	
SDD B2B - variant 3 - version 2	pain.008.003.02.sbb		FUL	

- Protocol and Network Devices

The screenshot shows a list of protocol devices. At the top, there are navigation tabs: Sommaire, Certificats, Dispositifs (which is highlighted), and Utilisateurs. Below the tabs is a search bar with filters and actions buttons, including a "Nouveau dispositif protocolaire" button. The main area displays a table with columns: Libellé, Protocole, Trace, Alarme, and Statut. The table lists various protocols like AS2, CopyFile, EBICS, EBICSEC, EDI 3, eMail, External, FTP, and Http, each with its status set to "Activé" (Active).

Libellé	Protocole	Trace	Alarme	Statut
AS2	As2	Désactivé	Activé	Activé
CopyFile	CopyFile	Désactivé	Activé	Activé
EBICS	Ebics	Activé	Activé	Activé
EBICSEC	Ebics	Désactivé	Activé	Désactivé
EDI 3	Etebac3	Désactivé	Activé	Activé
eMail	Email	Désactivé	Activé	Activé
External	External	Désactivé	Activé	Activé
FTP	Ftp	Désactivé	Activé	Activé
Http	Http	Désactivé	Activé	Activé

Setup

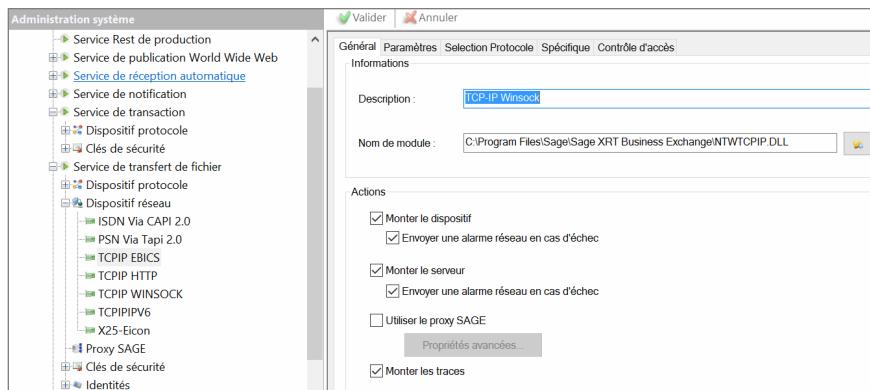

Setup

Server contract traces

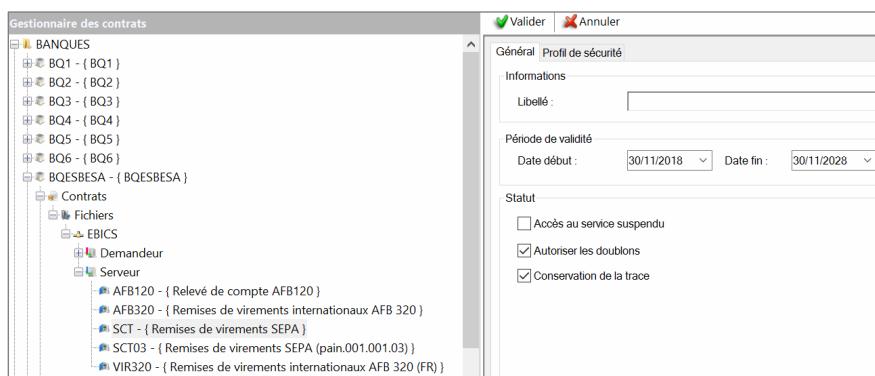

Server traces are no longer saved by default, thus reducing the amount of disk space required. Traces are available on contract level.

You can activate the traces in the **File Transfer Service** in **System Administration**.

On **Network Device** level in **General** tab, select the **Mount Traces** option.

In **Contract Manager**, for each **Server** flow, you can enable or disable the **Keep Trace** option.

- Enabled: the contract trace is saved for the flow
- Disabled: all traces are deleted for the flow

The **tracefile.exe** utility can be used to enable/disable traces for every server contract.

New usage **/M** has been added to specify the transfer mode:

- **DEM** for requester
- **SVR** for server

Setup

Email templates and signatures

With Sage XRT Business Exchange version **12.4**, you can now customize and sign your messages.

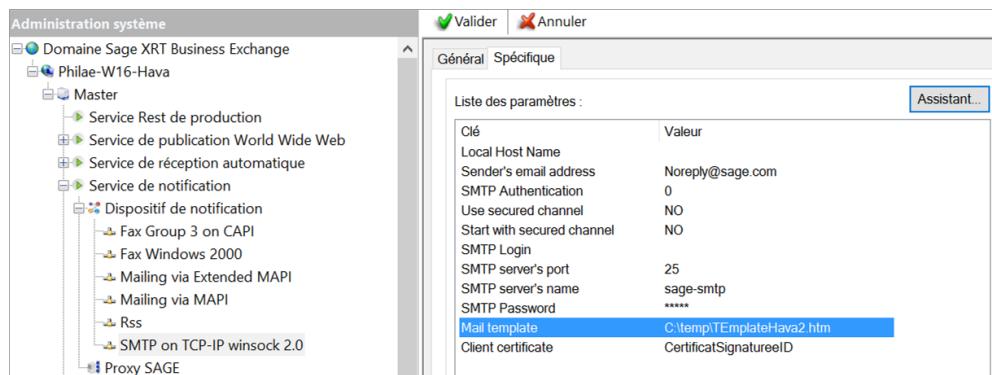

Templates and signatures can be defined in **General Setup** or on **notification contract** level.

General setup

In **System Administration**, on **Notification service** level, two variables have been added for SMTP network devices:

- **Mail Template**: you can add your own template file. File extension must be **html** or **htm**.
- **Client certificate**: you can add a signature certificate to sign the files to be sent.

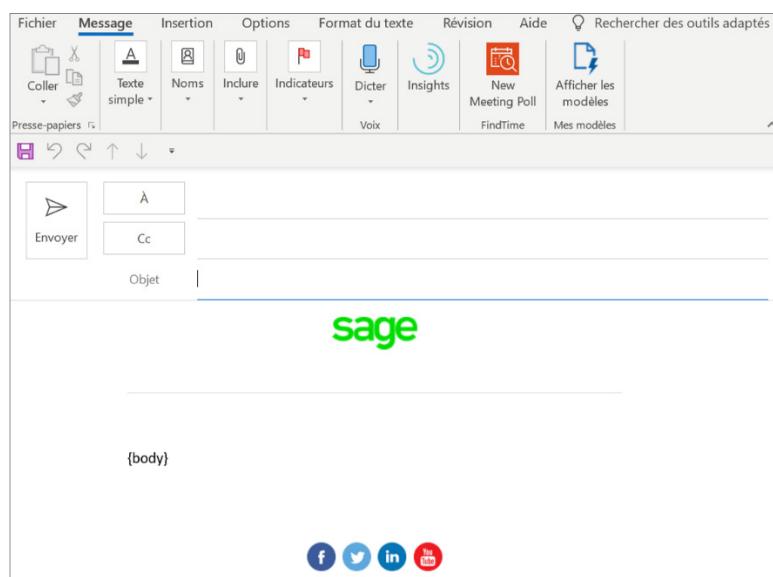

Note: With general setup, all emails sent through **Sage XRT Business Exchange** will use the template and certificate defined for SMTP service.

Setup

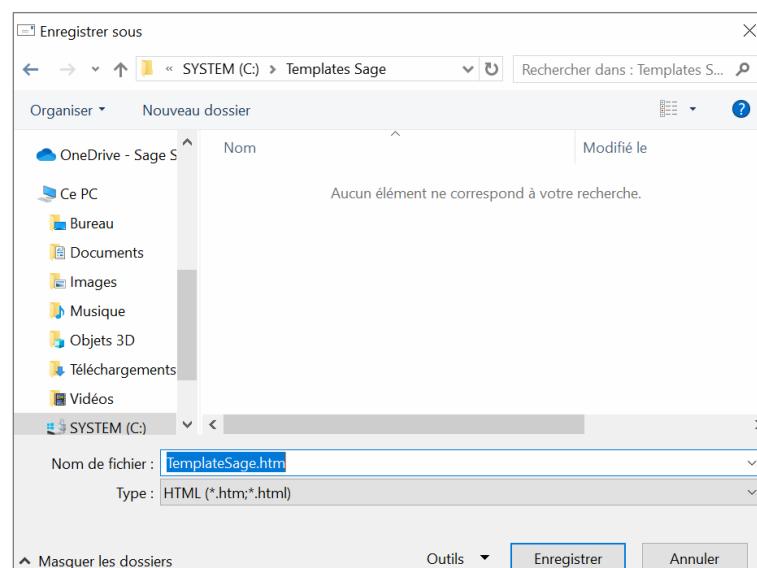

Example

1. You have created a template file: **TemplateSage.oft**. Open this file in your **Outlook** application.
2. Enter the **{body}** tag somewhere in the message text body, to display the processes issued from **Sage XRT Business Exchange**.

Important! Do not enter the subject or recipients. This information will be automatically generated by the processes from **Sage XRT Business Exchange**.

3. Click **File - Save as**, then browse for the directory in which you want to create the template.
4. Enter a file name then select the **HTML (*.htm;*.html)** type.

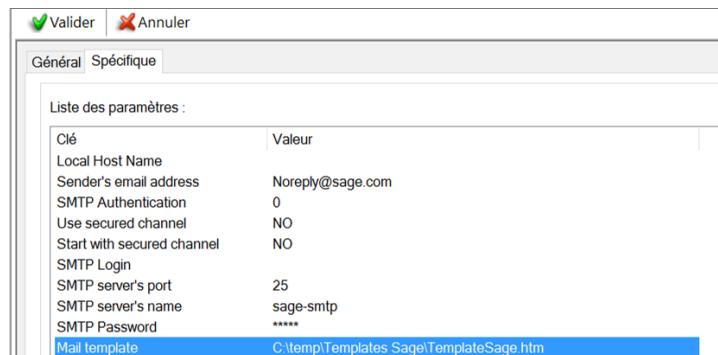

Setup

The **TemplateSage_files** folder includes the image files used in the template. It must be placed in the same directory as **TemplateSage.htm**.

TemplateSage_fichiers	26/02/2020 10:56	Dossier de fichiers
TemplateSage.htm	26/02/2020 10:56	Fichier HTM

5. On **Notification Service** level, select your template as the value for the **Mail Template** variable.

6. In **Sage XRT Business Exchange**, you can set up messages per specific process, e.g. adding files to the **Signature Station**.

Message

Informations

Entité : SBESAGE - Ma société

Notification : ADMIN - Notifications

Paramètres...

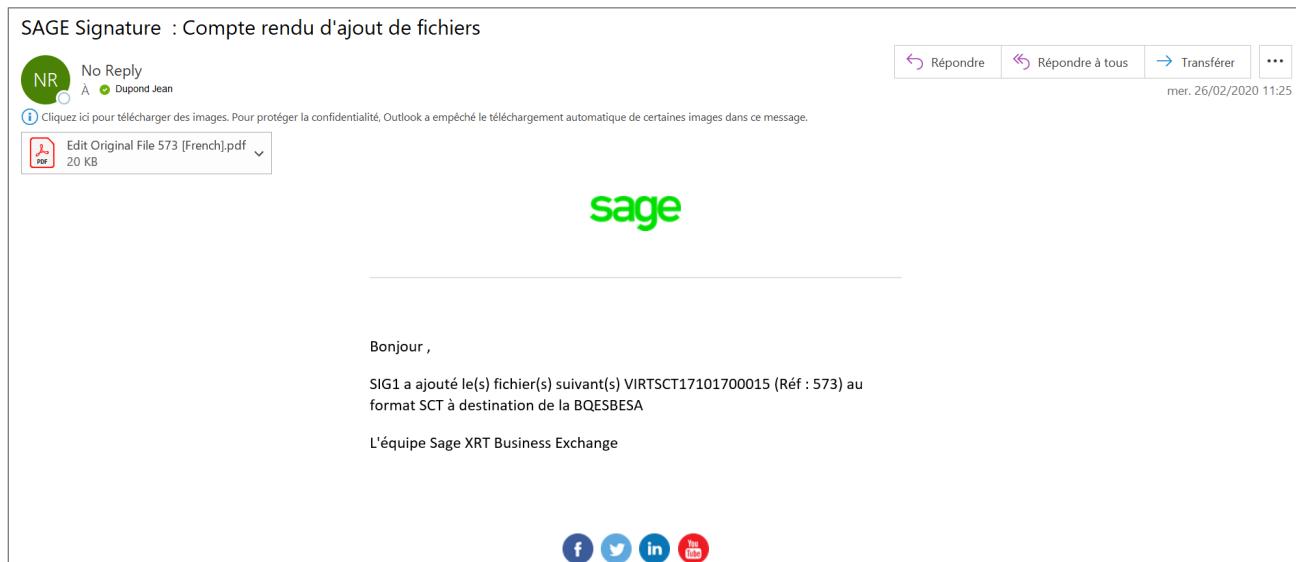

Objet : SAGE Signature : Compte rendu d'ajout de fichiers

Texte : Bonjour,
\$PARAM_NAM a ajouté le(s) fichier(s) suivant(s) \$PARAM_FILE (Réf : \$PARAM_REFFILE) au format \$PARAM_SERVICE à destination de la \$PARAM_PARTNER
L'équipe Sage XRT Business

Pièces jointes : \$PARAM_ORIGFILE_FR

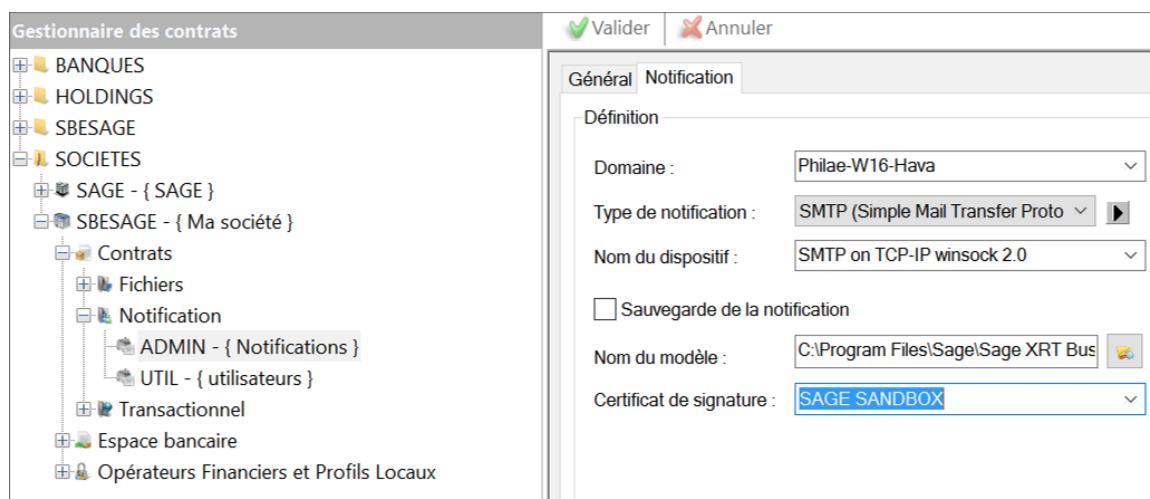

Setup

Each time the process is executed, the users will receive an email which content is defined by your template.

Notification contracts setup

In Service Manager, on **Contracts - Notification** level, you can specify a template in the **Template Name** field and select a certificate in the **Signature Certificate** list for each notification contract.

Setup

Modification of the HTML file

You can customize the HTML file for the message, by setting up a structure of text blocks or changing the font.

Example

Enclose the **{body}** tag with the following tags:

```
<pre>{body}</pre>
```

In the **<style>** section, insert this block:

```
pre {  
    display: block;  
    font-family: Calibri;  
    font-size: 16px;  
    white-space: pre;  
    margin: 1em 0;  
}
```

Message groups will be separated by carriage returns and *Calibri* font used.

The screenshot shows an email message with a green "sage" logo at the top. Below it, there is a horizontal line. The message content is divided into two distinct sections by two carriage returns. Each section contains a text message in black font, indicating that two different files (N° 563 and N° 564) are pending signature and must be sent today to meet processing deadlines.

Le fichier N° 563 de type Service SCT à destination du Partenaire BQESBESA
{BQESBESA} sur le Protocole EBICS pour le Client Ma société {SBESAGE} est en
attente de traitement dans la Signature et doit être envoyé aujourd'hui pour
respecter les délais de traitement spécifiés.

Le fichier N° 564 de type Service SCT à destination du Partenaire BQESBESA
{BQESBESA} sur le Protocole EBICS pour le Client Ma société {SBESAGE} est en
attente de traitement dans la Signature et doit être envoyé aujourd'hui pour
respecter les délais de traitement spécifiés.

Setup

Creating variables

You can use a **JSON** file to add variables to the message.

Example

1. Create a **Template.html** file along with a **Template_files** folder for the images.
2. Create a **Template.json** file that will include, for example, the following variables:

Variable	Content	Comment	
"htmlbody"	"template/template.html"	Template file identification	R
"Signbas"	R&D Team	Signature	O

3. In the **Template.html** file, insert the **{body}** and **{Signbas}** variables where you need their content to be displayed.
4. In **SMTP** service or **Notification Contrat** setup, specify the value **template.json** for **MailTemplate** variable.

Bonjour , SIG1 a ajouté le(s) fichier(s) suivant(s) VIRTSC17101700015 (Réf : 582) au format SCT à destination de la BQESBESA

L'équipe R&D SBE

Setup

Configuration of production Rest service

You can now use the **System Administration** interface to configure the production *Rest* service (**P5RAPI**).

Service	Configuration	Paramètres	Spécifique
Liste des paramètres :			
		Assistant...	
Clé	Valeur		
UseSecureChannel	NO		
OAuthDecryption	Auto		
ActiveDocumentation	NO		
OAuthValidationAlgorithm	HMACSHA256		
OAuthValidationKey	AutoGenerate,IsolateApps		
AdditionnalPath	srp		
Address	philae-W16		
DefaultAuthScheme	Anonymous

Setup

SCS authentication settings

The URL to access the authentication service from **Sage XRT Common Services** as well as the **SOB** profile credentials are now available from the **System Administration** interface, in the **SCS Authentication** tab of your site.

This setup will replace:

- Authentication information on Transaction Service level for **Onlinebanking** protocol device, and login information set up in the **Repository** tab.
- Authentication settings for production *Rest* service (**P5RAPI**).

Features

Features

Update of Sage eidSign signature service

You can decline the update prompt for **Sage eidSign** signature service on client stations.

Open the **Tools - Update eiDSign** menu to view your version number, turn notifications on/off and launch the update process.

Note: The service installation requires administrator rights on the client station.

Business Activity Monitoring

You can use the **P5BAM.EXE** utility to collect product and environment information (consumption and usage statistics, technical information, etc.).

You can also launch and get results from your maintenance plans.

Set up your own requests in the **P5BAM.INI** config file and define a layout for *html* data by creating or editing a **P5Bam.css** / **P5Bam.ihead** couple.

P5BAM.INI config file can be encrypted and signed if data protection is enabled.

You can disable data protection only if authorized by the *DPO (Data Protection Officer)*.

Usage: P5BAM [/MODEL: { /TXT: /CSV: /HTM: /ITM: /XML: /JSON:} /CS: /DEC: /IHEAD: /P: /A: /SERVER:]	
/MODEL	Template name (GENERAL MODEL LIST group in P5BAM.INI file)
/ANALYSE	Analysis group name
/PLAN	Maintenance plan name
/TXT	TXT format generated

Features

/CSV	CSV format generated
/HTM	HTML format generated
/ITM	HTML table format embedded in Email
/XML	XML format generated
/JSON	JSON format generated
/CS	Encrypts and signs the analysis file Enables data protection in the Data Protection tab of the site. Clear access can be authorized in analysis model configuration.
/DEC	Decrypts the analysis file
/IHEAD	Header file name (HTM and ITM export formats only)
/NOACTION	No action launched, enables to collect the result from a maintenance plan request without executing the process.
/UID	User login. Specifies the account used for process execution.
/PWD	User password
/P	Notification entity name
/A	Notification alias name
/SERVER	Site name

Variables used for file name generation	
Year	\$AAAA\$ / \$YYYY\$ / \$AA\$ / \$YY\$ / \$A\$ / \$Y\$
Month	\$M2\$ / \$M\$
Day	\$DD\$ / \$JJ\$
Time	\$HH\$
Minutes	\$MM\$
Seconds	\$SS\$
Day number	\$QT\$

E.g.:

```
P5BAM.EXE /MODEL:Default "/HTM:c:\temp\statistiquesGénérales$AAAA$.html"
"/IHEAD:C:\Program Files\Sage\Sage XRT Business Exchange\p5bam2.ihead"
/P:SBESAGE /A:ADMIN
```

Features

Example of received HTML file:

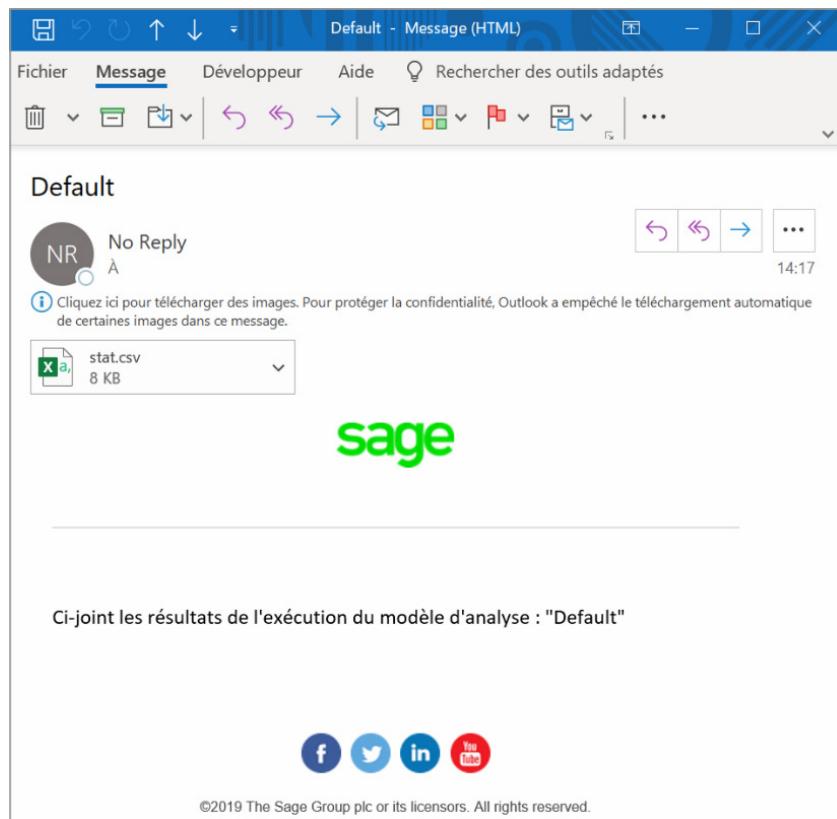

Répartition par type d'entité	
type d'entité	nombre
Banque	8
Holding	1
Filiale	2
Entreprise	1

Nombre d'utilisateur						
nombre						
15						

Nombre de signataire						
nombre						
14						

Répartition par devise						
devise	total montant	min montant	max montant	total transaction	min transaction	max transaction
EUR	18230152,97	0	343602,65	4867	0	22

Example of Email with attached CSV file:

The screenshot shows an Outlook message window titled "Default - Message (HTML)". The message header includes "Fichier", "Message" (which is underlined), "Développeur", "Aide", and a search bar. Below the header are standard Outlook toolbar icons for reply, forward, and save. The main body of the email starts with "Default". It features a circular profile picture with "NR" and "No Reply" text. To the right are navigation icons (back, forward, etc.) and the time "14:17". A note below the profile says: "Cliquez ici pour télécharger des images. Pour protéger la confidentialité, Outlook a empêché le téléchargement automatique de certaines images dans ce message." A file attachment is shown with the name "stat.csv" and size "8 KB". Below the attachment is the Sage logo. The message concludes with "Ci-joint les résultats de l'exécution du modèle d'analyse : "Default"" followed by social media sharing icons (Facebook, Twitter, LinkedIn, YouTube) and the copyright notice "©2019 The Sage Group plc or its licensors. All rights reserved."

Features
